

Remaining Changes on Mega DM

Launch-ready website cleanup, real-product presentation and White Label positioning

Goal	Make MegaDM look credible, product-led and ready for launch - while accurately presenting the features that are already working.
-------------	--

1. Pricing / Platform Section

Fix the visibility first.

The dark/black text is getting lost against the purple background. Increase contrast so every heading, paragraph and toggle label is immediately readable on mobile and desktop.

Remove WhatsApp and Telegram.

Keep only platforms that MegaDM genuinely supports at launch. If a platform or integration is not currently available, remove it everywhere on the website - pricing, features, graphics, copy, FAQ and navigation.

Pricing toggle.

Monthly / Annual and “Save 20%” must be visually clear and function correctly. Pricing cards below it must use the final real plans and limits only.

Important clarification: AI features and email collection are already working in MegaDM, so they should **remain on the website** and can be presented as live features. Do not remove them during the cleanup.

2. Replace Hover Cards with Real MegaDM Product

The current “One Platform, Total Control” cards should **not rely on hover-to-view details**. Hover is weak on mobile and makes the product feel like a concept rather than a working SaaS.

Replace the visual cards with real MegaDM product screenshots for the actual live modules - including Comment Automation, Inbox Automation, Bio Link Automation and other working product areas.

Use screenshots from the actual dashboard and give them a tasteful **AI beauty touch**: clean crop, polished framing, subtle depth, device/dashboard presentation and stronger visual hierarchy.

AI enhancement is for presentation only. Do not invent UI, buttons, analytics, features or results that are not in the real product. Make the screenshots readable on mobile without requiring hover.

3. Remove “Global Success List” - Use This Space to Sell White Label

Remove the complete “**The Global Success List**” section and its testimonial-style cards unless every person, quote and metric is from a genuine, verifiable MegaDM customer.

Use this high-value homepage space for a **dedicated White Label section** instead. White Label should not exist only as another pricing card - it targets agencies and resellers, which is a different buyer from normal creators.

Suggested headline: Run MegaDM Under Your Own Brand

Suggested supporting copy: Launch your own Instagram & Facebook automation platform without building the technology from scratch.

Show the core value visually: **Your Logo - Your Brand - Your Domain - Your Customers - Your Pricing** (only include items actually supported).

CTA: Start Your White Label / Talk to Sales.

4. Add Broadcasting to the Landing Page

Add a dedicated product feature on the landing page for **Instagram + Facebook Broadcasting**. This is a real selling point and should be visible alongside the core automation features rather than being buried inside the dashboard.

Recommended landing-page copy

Instagram & Facebook Broadcasting

Send targeted broadcasts to eligible Instagram and Facebook contacts directly from MegaDM. Re-engage recent conversations, share updates, offers and follow-ups from one workspace.

Clearly disclose the 24-hour messaging window.

The landing page must explain that broadcasting is subject to Meta's messaging rules and the applicable last 24-hour interaction / messaging window. Do not describe it as unlimited bulk messaging or imply that every follower/contact can be messaged at any time.

Suggested UI treatment: show a real Broadcasting screen from MegaDM with the same polished “AI beauty touch” used for other product screenshots. Add a small visible note such as “**Broadcasting availability is subject to Meta's 24-hour messaging window and platform rules.**” Exact wording should match the implemented Meta permissions and behavior.

5. White Label Needs Its Own Sales Journey

Do not depend only on the main Pricing section. Add a homepage White Label section plus a dedicated **/white-label** page and a visible White Label navigation item.

Recommended White Label page structure

Hero: Sell social automation under your own brand.

What the agency gets: branding, client/user management, supported account limits, Bio Links, reseller capability, custom domain or other controls only where technically available.

How it works: Subscribe -> Brand your workspace -> Add/manage clients -> Sell the service under your brand.

Pricing: clearly show the final White Label base plan, included user/account limits, expansion blocks and any branding/removal fee. Avoid hidden or ambiguous add-ons.

CTA: Start White Label / Talk to Sales, followed by a focused White Label FAQ.

6. Full-Site Feature Cleanup

Audit **Home, Features, Pricing, Blog, About, Contact, FAQ, footer, menus, graphics, metadata and mobile views**. Remove only functionality that MegaDM does not currently have. **AI functionality and email collection are confirmed working and must remain**. Unsupported platforms such as WhatsApp and Telegram should be removed wherever they are presented as current MegaDM functionality.

For launch, the website should distinguish clearly between live functionality and anything genuinely planned for later.

7. Trust & Claims Cleanup

Remove placeholder/fake-looking testimonials, customer names, avatars, revenue numbers, growth percentages, email counts, conversion claims, uptime/safety claims or performance statistics unless MegaDM has evidence for them. Replace them with real product proof: dashboard screenshots, actual workflows, supported Meta/API positioning and real customer proof when available.

Any Meta/API wording should accurately describe the integration and should not imply an endorsement or status MegaDM does not actually hold.

8. Final Mobile + Desktop QA

Check text contrast, font sizes, spacing, screenshot readability, sticky CTA overlap, navigation, pricing toggle, buttons, links, forms, footer, responsive cards and horizontal overflow. The final mobile experience should not depend on hover. Test every CTA end-to-end before launch.

Final direction

Real product > decorative mockups. Clear White Label offer > generic social proof. Keep working AI + email collection visible. Add Instagram + Facebook Broadcasting with a clear 24-hour-window disclosure. Remove unsupported functionality and make every section easy to understand and trust.
